

About Us

Dapp Wallets, Crypto Pulses, and Decentralized Applications

1. DAPP WALLETS

You may choose to use our dapp wallet ("Dapp Wallet") [cite: 50]. Our Dapp Wallet allows you to access a digital asset browser and link to decentralized exchanges ("Crypto Pulses") and other decentralized applications (collectively, "Dapp(s)") [cite: 51].

The Dapp Wallet enables users to:

- Store digital assets [cite: 52].
- Access a digital asset browser and link to Dapps [cite: 52].
- View addresses and information belonging to digital asset networks and broadcast transactions [cite: 53].
- Participate in retail Crypto Pulse transactions and related activities [cite: 54].

1.1. Ownership and Control

You own and control the digital assets held in your Dapp Wallet [cite: 55]. As the owner, you bear all risks of loss; Coinbase assumes no responsibility for fluctuations or losses caused by your use of the Dapp Wallet [cite: 56, 57]. You may withdraw your Digital Assets at any time by sending them to a different blockchain address [cite: 58].

1.2. Third-Party Services and Environments

We provide access to Third-Party Services, such as Crypto Pulses and Dapps, strictly as a convenience [cite: 59, 62]. Assets are not transferred to us when accessing these services [cite: 61]. We have no control over their content, legality, or availability, and do not guarantee or endorse them [cite: 62]. These services may offer assets with high risk or potential for loss [cite: 63].

1.3. Fees

Third parties may charge fees for services accessed through the Coinbase website [cite: 64, 65]. These are not charged by or paid to Coinbase [cite: 66]. Any Coinbase-specific fees will be clearly displayed before you submit a transaction [cite: 67].

1.4. Supported Assets

The Dapp Wallet is intended only for Dapp Supported Assets [cite: 69]. Attempting to store or receive unsupported assets is prohibited, and Coinbase is not responsible for any resulting losses [cite: 70, 71, 72]. Support for any asset may be terminated at our discretion [cite: 73].

2. DIGITAL ASSET TRANSFERS

The wallet allows you to send, request, receive, and store Dapp Supported Assets [cite: 75]. We recommend sending small test amounts before larger transactions [cite: 77].

2.1. Pending Transactions

Transactions remain in a pending state until confirmed by the Digital Asset Network [cite: 78]. Transfers are not completed while pending and assets will not be available in the Dapp Wallet during this time [cite: 79, 80].

2.2. Inbound and Outbound Transfers

For **Inbound Transfers**, the initiator is solely responsible for correct execution; incorrectly transmitted assets will be lost [cite: 81, 84]. Network or miner fees are required [cite: 85].

For **Outbound Transfers**, transactions are executed per your instructions [cite: 87]. Coinbase is not responsible for incorrect addresses or incompatible wallets [cite: 89]. Once broadcast to the network, transfers cannot be reversed [cite: 91].

3. LIMITATION OF LIABILITY

We make no warranties regarding the security or privacy of linked third-party services [cite: 95]. You assume full responsibility for all risks arising from their use, including the risk of loss of assets [cite: 96]. Coinbase is not liable for damages related to third-party services [cite: 97].
